Node.js Training session-2 hometask.

Problem statement.

1. Create a node.js command line program which reads operation(add, subtract, multiply, division) and values as arguments and returns the appropriate output onto console as in below criteria
    a. node app.js --operation addition 1 2 3 4 => 1+2+3+4 = 10
    b. node app.js --operation multiply 1 2 3 4 => 1*2*3*4 = 24
    c. node app.js --operation subtraction 2 1 => 2 - 1 = 1
    d. node app.js --operation division 4 2 => 4/2 = 2
2. All the invalid cases need to be handled for all the operations
3. Include validations for unsupported operations, number of inputs etc.

Note: Please note that addition and multiplication takes "n" values for inputs. Subtraction and division takes 2 values for input.
